

ABSTRACT

A wireless communication terminal includes a measurement section that measures quality of a signal transmitted from a base station, a determination section
5 that determines whether or not handoff is to be performed based on a measurement result of the measurement section and a criterion of the determination of the handoff, and handoff section that performs the handoff based on a determination result of the determination section, wherein
10 the determination section changes the criterion of the determination of the handoff when the handoff section performs the handoff in a predetermined repetition pattern.
